Dappfort is a blockchain-focused [Web3 development company](#) that helps businesses harness the power of decentralized technologies to build secure, scalable, and future-ready digital solutions.

Headquartered in Madurai, India, with additional presence in London, Dappfort works across a broad range of industries - including finance, healthcare, gaming, retail, and supply chain - delivering tailored blockchain and Web3 applications to startups, enterprises, and global organizations.

The company's core services include the design and development of decentralized applications (DApps), crypto exchanges (centralized and decentralized), crypto wallets, NFT marketplaces, DeFi platforms, token creation, smart contract development, and enterprise Web3 integration. Dappfort also expands into related areas such as Web3 e-commerce, AI-powered blockchain solutions, and metaverse experiences, supporting clients from strategy and consulting through deployment and ongoing support.

With expertise in major blockchain networks like Ethereum, Solana, Binance Smart Chain, and others, Dappfort positions itself as a full-

stack partner for businesses aiming to enter or grow in the decentralized digital economy. While the company promotes a strong innovation- and security-oriented approach, external reviews on third-party platforms show mixed feedback from users about project delivery and quality.

In addition, Dappfort offers specialized services such as cryptocurrency exchange development services, [cryptocurrency wallet development services](#), crypto trading bot development services, and crypto payment gateway development services, enabling businesses to build comprehensive and high-performance digital asset ecosystems.
