DrPro focuses on providing the latest healthcare management software that fits the needs of clinics, hospitals, and pharmacies. The Clinic Management System will benefit from having the following features; a Schedule 2 flow chart, Patients' Record Tracking flow chart, and Billing. This is perhaps a central data processor that connects most of the directorate in a hospital with the overall purpose of enhancing the delivery of patient care, administration, and hospital properties. Pharmaceutical inventory management, prescription flow, and regulation compliances ensure the accurate operation of DrPro's pharmacy.

We also have a safer electronic health record system for storing patient information for easy reference by other relevant caregivers in compliance with data protection laws. Among the useful tools that exist in DrPro include; the Inventory Management System that assists it in keeping track of stocks and orders and managing suppliers through the Suppliers Management to get supplies on time. Even more important is

that using the EMR platform ensures safety in keeping all patient histories, medical treatments, and diagnostics data in one place. The concept of DrPro is to equip healthcare providers with tools to better control patient flow and raise efficiency.
