DrPro is an AI-powered Hospital and Clinic Management Software designed for hospitals, clinics, diagnostic centers, and healthcare professionals. It helps manage appointments, billing, EMR/EHR, OPD/IPD, pharmacy, laboratory, and patient records with cloud-based automation.

The hospital management system connects all the core sections, providing the patients' strategic data, the inventory's role, and organizational functioning. Similarly, our Pharmacy Management System enhances inventory efficiency, prescription processing, and regulatory compliance management. DrPro can also integrate and manage the electronic health record (EHR), which allows authorized users to view the patient's records and be on par with the medical guidelines.

Furthermore, our tools for inventory and supplier management make the stock processing and ordering process simple, thus freeing healthcare providers to offer services. The EMR system in DrPro

integrates the functionalities for storing Electronic patient records, treatment histories, diagnoses, and other medical histories in a secure and centralized location that can be recorded and accessed from any location. Regardless of the type and size of facility you manage from a small clinic to a big and busy hospital, the software solutions that are offered by DrPro can be specifically tuned to address your needs and necessarily make the work of a healthcare organization more productive and patient-centered.
