JSON Schema App is a schema markup solution that automates the creation and deployment of JSON-LD structured data across websites. It helps businesses improve their chances of earning rich search results and increasing visibility across traditional search and AI-powered platforms.

The tool scans website pages, identifies relevant schema types, and automatically adds structured data without requiring manual coding. It supports 30+ schema types, including Product, FAQ, Article, LocalBusiness, Review, Recipe, Event, Organization, and BreadcrumbList.

With native integrations for 15+ major platforms, including Shopify, Wix, Squarespace, BigCommerce, Webflow, and HubSpot, JSON Schema App makes structured data easier to manage across different websites and ecommerce platforms.
