Electrical components support numerous control and operational functions within locomotive systems, making their reliability important for maintenance and equipment performance. Rail Associate Enterprises supplies electrical spare parts including controllers, contactors, cables, terminals, carbon brush holders and wick pad assemblies. Its portfolio also includes other control-related products used in locomotive applications. These components can be useful for workshops carrying out electrical maintenance, replacement work and refurbishment activities. The company combines electrical products with mechanical and engine components, including power packs, pistons, crankshafts, compressors, turbochargers, fuel equipment and braking systems. This wide product coverage provides customers with a convenient source for different locomotive requirements. Rail Associate Enterprises also offers selected technical services, helping customers address repair and servicing needs beyond basic component procurement. Railway operators, workshops and industrial users can explore the company's electrical and broader locomotive product categories through its official website. Visit:
