Maheshwari Enterprises – Geotechnical, Rock Anchoring & Structural Rehabilitation Experts in Mumbai

Established in 1992 and rebranded in 2017, Maheshwari Enterprises has evolved into a specialized and trusted name in the field of geotechnical contracting, structural rehabilitation, rock anchoring, guniting, waterproofing, and abrasive blasting & painting services. Based in Mumbai, we bring decades of industry expertise to support infrastructure development, excavation safety, and structural strengthening projects across Maharashtra and beyond.

Over the years, Maheshwari Enterprises has built a solid reputation for delivering technically sound, cost-effective, and safety-driven solutions to private developers, industrial plants, public infrastructure contractors, and construction companies. Our focus has always been on executing challenging projects with high precision, timely delivery, and strict adherence to safety protocols.

We specialize in a range of technically demanding services that support tunneling, excavation, slope protection, repair of aging structures, and foundation stability. Our core services include guniting

or shotcreting, soil and rock anchoring, pressure grouting, waterproofing, abrasive blasting and industrial painting, structural rehabilitation, and machine rental support for construction works.

[Guniting and Shotcreting Services](#) in Mumbai

Guniting, also known as shotcreting, is a core service we offer for strengthening and protecting concrete surfaces. This method involves pneumatically projecting concrete onto prepared surfaces, ideal for slope stabilization, tunnel linings, and structural rehabilitation. Our expert team uses state-of-the-art guniting machines to ensure uniform application and high-quality finishes. Guniting is widely applied in retaining walls, old concrete structures, canal lining, and metro or infrastructure tunnels. Our services are trusted by contractors across Mumbai, Thane, and Navi Mumbai. We adhere to all safety and material standards while executing guniting jobs.

[Soil and Rock Anchoring Solutions](#)

We specialize in both passive and active anchoring techniques for rock and soil stabilization. Rock anchoring is essential for supporting unstable slopes, open excavations, and tunnel faces. Our services include vertical, inclined, and horizontal anchoring using high-strength steel bars and grouted anchors. Soil nailing is another method we use for slope and wall stabilization. With thorough site inspections and geological evaluations, our engineering team ensures each anchoring system is designed and installed to withstand long-term stresses and environmental loads. This service is critical in infrastructure projects, deep excavations, and construction near hilly terrain.

[Pressure Grouting Services](#)

Pressure grouting is a key technique we employ to strengthen foundations, fill voids, and stop water ingress in below-ground structures. It involves injecting cementitious or chemical grout under pressure to stabilize soils or seal cracks. We use this technique in areas where ground support is needed or where subsurface voids and leakage can affect structural integrity. Our pressure grouting services are commonly used in tunnel rehabilitation, basement waterproofing, dam maintenance, and ground improvement works in Mumbai's densely developed zones.

[Abrasive Blasting and Protective Painting](#)

Maheshwari Enterprises also offers abrasive blasting and industrial painting services to clean, protect, and prepare steel and concrete surfaces. Our team is equipped with grit blasting tools and surface

preparation equipment that meet SA2.5 and other international standards. We use epoxy, PU, and zinc-rich coatings for corrosion protection in industrial environments. These services are especially useful for power plants, chemical industries, tanks, and steel structures that require long-lasting surface protection in humid or corrosive conditions.

Structural Repairs and Rehabilitation

Aging structures in Mumbai, including buildings, bridges, and water tanks, often require repair and strengthening. We specialize in the rehabilitation of reinforced concrete structures through techniques such as polymer mortar patching, crack injection, jacketing, and fiber wrapping. Our structural repair services extend the life of infrastructure by improving load-carrying capacity and arresting further deterioration. These services are particularly important for old buildings in the city undergoing redevelopment or safety upgrades.

Waterproofing for Monsoon Protection

Given Mumbai's high rainfall and coastal humidity, waterproofing is essential for the longevity of any building. We provide comprehensive waterproofing services including terrace coatings, basement leak sealing, bathroom waterproofing, and expansion joint treatments. We use PU coatings, crystalline systems, bituminous membranes, and injection grouting depending on the surface type and water exposure level. Our waterproofing services are highly in demand before and during the monsoon season for both commercial and residential clients.

[Civil Support Works](#)

While we do not undertake full-scale civil contracting, we actively provide technical and structural support in civil infrastructure projects. These include tunnel lining via shotcreting, slope plastering, shuttering support, and wall rehabilitation. Our role is often collaborative, working alongside civil contractors to execute specific technical tasks that require precision, materials expertise, and equipment support.

Construction Machine Rental

To further support our clients, we also offer construction equipment rental services. Our fleet includes guniting machines, blasting hoppers, mixers, and grout pumps. These machines are available for short-term or project-based hiring and come with or without operator support. All equipment is regularly maintained and ready for on-site use. This service benefits clients who prefer to execute certain jobs with in-

house manpower while using reliable machinery.

Industries We Serve

Maheshwari Enterprises serves a wide range of industries including infrastructure development (metro, flyovers, tunnels), mining, oil and gas, public utilities, industrial manufacturing, and residential redevelopment. Our solutions are tailored to meet project-specific demands, whether it's stabilizing an excavation in a metro project, waterproofing a leaking water tank, or repairing an industrial foundation.

Why Choose Us

With a strong track record since 1992, Maheshwari Enterprises is trusted by civil engineers, project managers, and government contractors alike. Our team consists of experienced technicians, site engineers, and machine operators who are trained in best practices and safety compliance. We combine human skill with high-end equipment to deliver projects that are structurally sound and built to last. Our focus is always on timely delivery, precision execution, and customer satisfaction.

Locations We Serve

While based in Mumbai, our operational coverage includes Andheri, Dadar, Kurla, Sion, Dharavi, Bhandup, Lower Parel, Navi Mumbai, Thane, and nearby industrial zones. Our mobile teams allow us to serve clients across the Mumbai Metropolitan Region and respond quickly to urgent site requirements.

Contact Maheshwari Enterprises

For professional rock anchoring, guniting, waterproofing, or any ground engineering service, Maheshwari Enterprises is your reliable execution partner. We welcome inquiries from infrastructure developers, builders, industrial clients, and civil consultants.
