Industrial environments are becoming increasingly connected, making OT cybersecurity more critical than ever. SCADA and DCS systems can face risks from legacy assets, delayed patching, insecure remote access, weak network segmentation, misconfigurations, and limited security monitoring.

This article by The Evolv Edge explores key cybersecurity vulnerabilities found across OT/ICS environments and highlights practical approaches for vulnerability management, secure remote access, network segmentation, continuous monitoring, and cyber resilience. It also introduces the role of industry guidance such as IEC 62443 and NIST SP 800-82 in strengthening industrial cybersecurity programs.

Understand the risks. Strengthen your defenses. Protect critical operations.
