IPC manufactures the full range of Gate Valve, which are ideal for bi-directional, low friction flow and shut-off as per international standards. Due to the flow characteristics of the wedge to seat design, Gate Valves are always operated in the full close or full open position.

IPC is leading manufacturer of [Gate](#), [Globe](#) & [Check](#) valves. Integral Process Controls was founded in 2001 with and objective to solve two key pain points for the customers. First, was to reduce the valve delivery time, significantly, to meet the aggressive demand timelines of the clients. Secondly, we sensed a need to meet the huge and largely unmet need for assured supply of quality valve and valve automation solutions of the customers.
